EXPERIMENT 5

AIM

Write the MATLAB program of Newton's Divided difference table and value of function of given any data set.

THEORY

NEWTON'S DIVIDED DIFFERENCE METHOD

The divided difference $f[x_0, x_1, x_2, ..., x_n]$, sometimes also denoted $[x_0, x_1, x_2, ..., x_n]$ (Abramowitz and Stegun 1972), on n+1 points $x_0, x_1, ..., x_n$ of a function f(x) is defined by $f[x_0] \equiv f(x_0)$ and

$$f[x_0, x_1, ..., x_n] = \frac{f[x_0, ..., x_{n-1}] - f[x_1, ..., x_n]}{x_0 - x_n}$$
(1)

for $n \ge 1$. The first few differences are

$$f[x_0, x_1] = \frac{f_0 - f_1}{x_0 - x_1}$$

$$f[x_0, x_1, x_2] = \frac{f[x_0, x_1] - f[x_1, x_2]}{x_0 - x_2}$$
(2)

$$f[x_0, x_1, x_2] = \frac{f[x_0, x_1] - f[x_1, x_2]}{x_0 - x_2}$$

$$f[x_0, x_1, ..., x_n] = \frac{f[x_0, ..., x_{n-1}] - f[x_1, ..., x_n]}{x_0 - x_n}.$$
(4)

Defining

$$\pi_n(x) \equiv (x - x_0)(x - x_1) \cdots (x - x_n) \tag{5}$$

and taking the derivative

$$\pi'_{n}(x_{k}) = (x_{k} - x_{0}) \cdots (x_{k} - x_{k-1}) (x_{k} - x_{k+1}) \cdots (x_{k} - x_{n})$$

$$(6)$$

gives the identity

$$f[x_0, x_1, ..., x_n] = \sum_{k=0}^{n} \frac{f_k}{\pi'_n(x_k)}.$$
 (7)

Consider the following question: does the property

$$f[x_1, x_2, ..., x_n] = h(x_1 + x_2 + ... + x_n)$$

for $n \ge 2$ and h(x) a given function guarantee that f(x) is a polynomial of degree $\le n$? Aczél (1985) showed that the answer is "yes" for n = 2, and Bailey (1992) showed it to be true for n = 3 with differentiable f(x). Schwaiger (1994) and Andersen (1996) subsequently showed the answer to be "yes" for all $n \ge 3$ with restrictions on f(x) or h(x).
